AGCL's Visit to 3D Printing Centre of Excellence, TechCity, Guwahati

3D METAL PRINTING BENEFITS FOR THE GAS INDUSTRY

AGCL visited the 3D Printing Centre of Excellence in Guwahati to learn about 3D metal printing's advantages for the gas industry. This technology allows for custom components and on-demand spare parts, reducing inventory costs and lead times while promoting sustainability through minimized material waste.

Additionally, it speeds up prototyping and development, supports cost-effective low-volume production, and enhances supply chain resilience with local manufacturing. The precision of 3D-printed parts improves safety by reducing installation errors, showcasing its potential to transform the gas industry.
